
A busy day at Dr. Ananya's clinic.

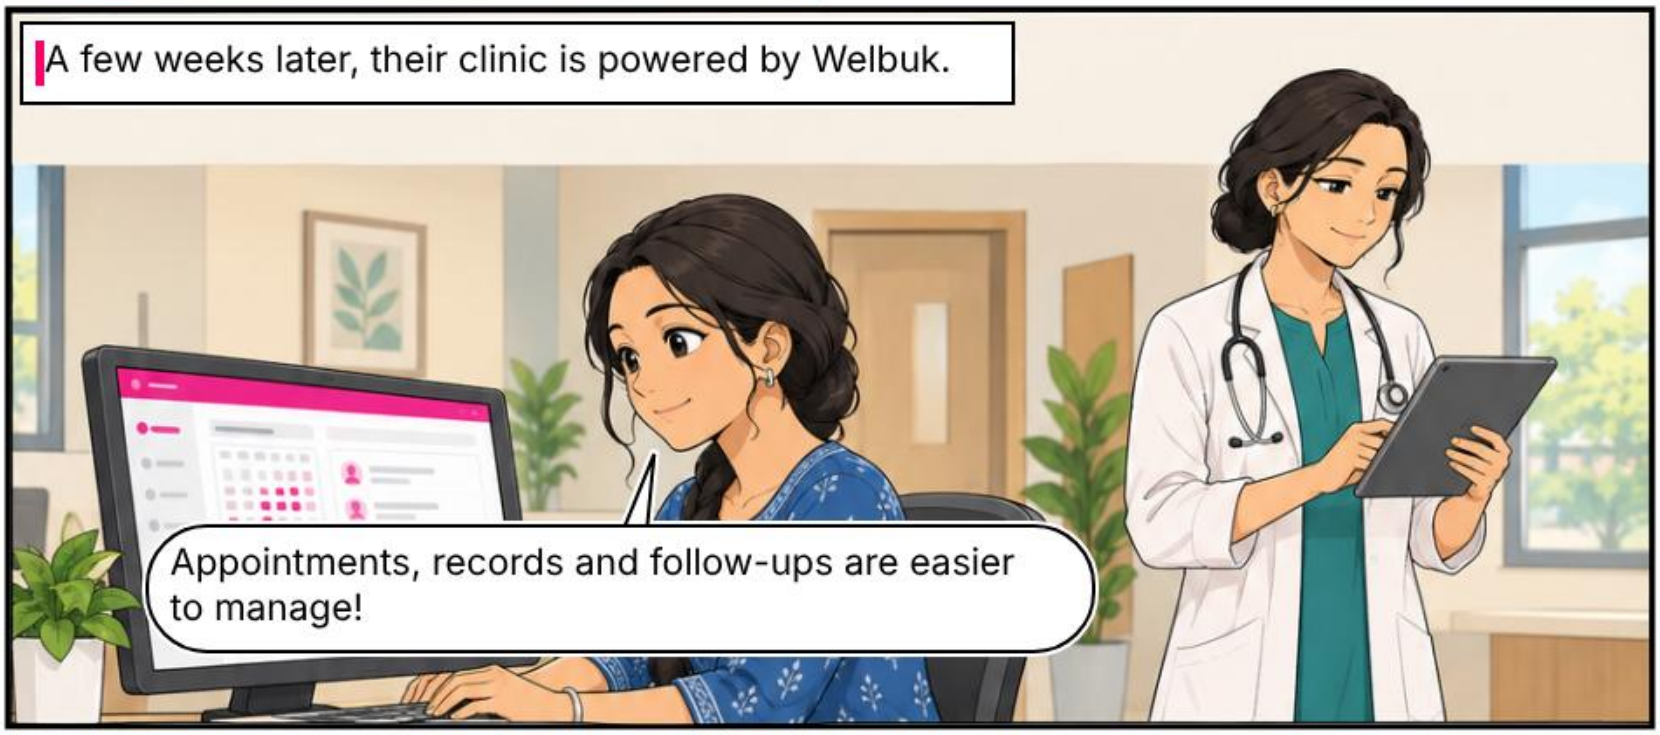

Appointments, patient details, follow-ups... there's always something to manage!

The patients have gone home... but we're still here.

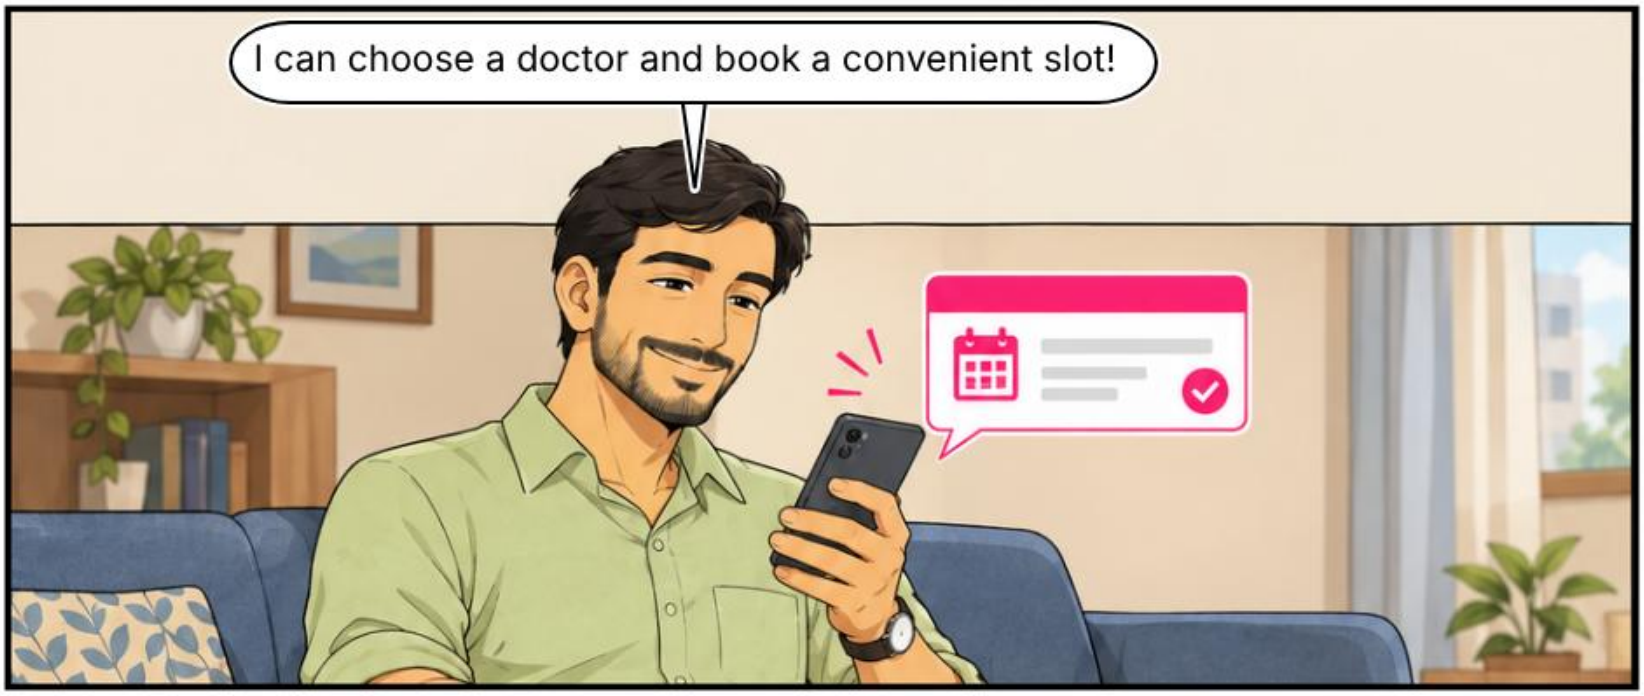

Our time should belong to patients, not paperwork.

Meera, I think we've found a better way.
Tell me more, Doctor!

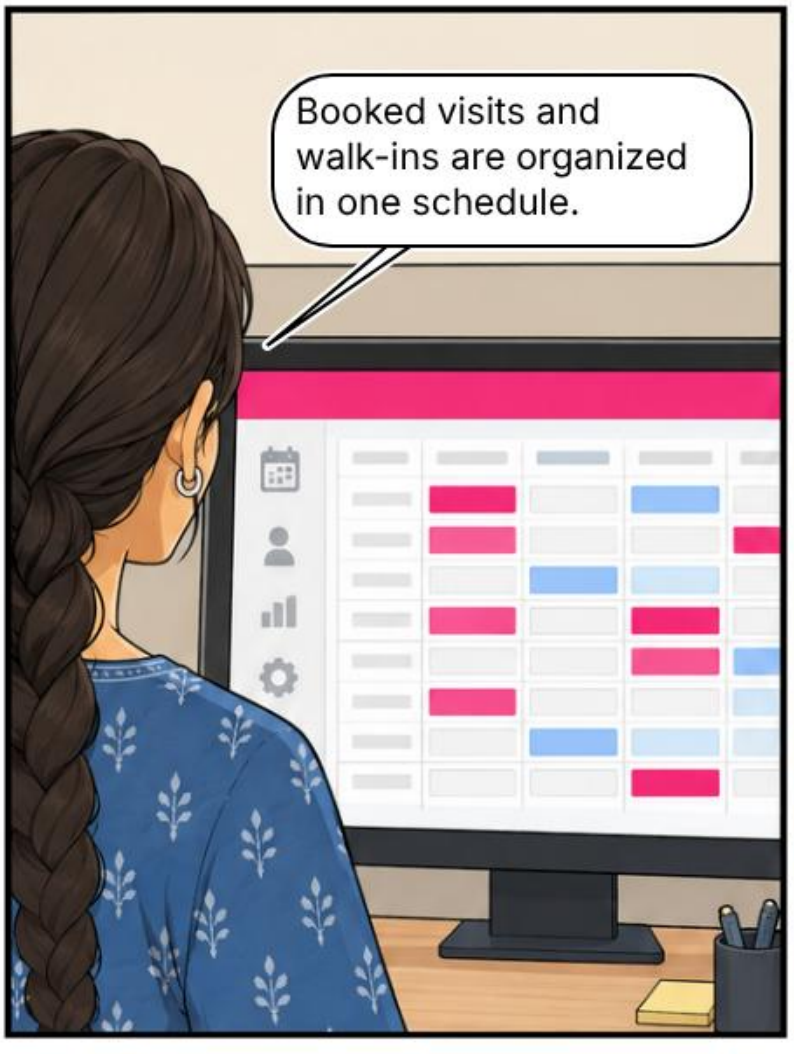

Welbuk connects clinic operations, staff workflows and patient care.
Screens shown are illustrative.

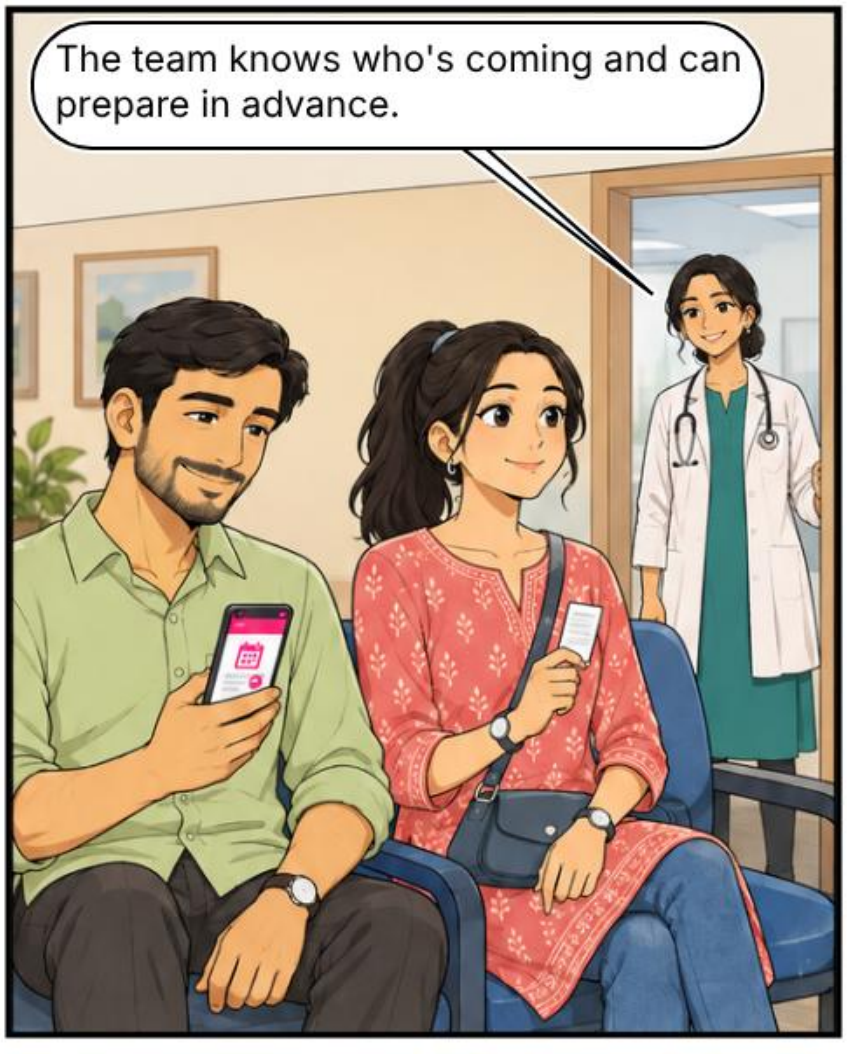

A few weeks later, their clinic is powered by Welbuk.
Appointments, records and follow-ups are easier to manage!

Now we can focus more on our patients.

I can choose a doctor and book a convenient slot!

I don't have an appointment. Can I still see the doctor?
Of course. Let me check the available slots.

Booked visits and walk-ins are organized in one schedule.

The team knows who's coming and can prepare in advance.

He needs urgent medical attention!

I'll alert the clinical team immediately.

Welbuk supports emergency-priority queue management.

Bring him in for assessment.

The queue is updated, and everyone knows the next step.

I can check in using this QR code!

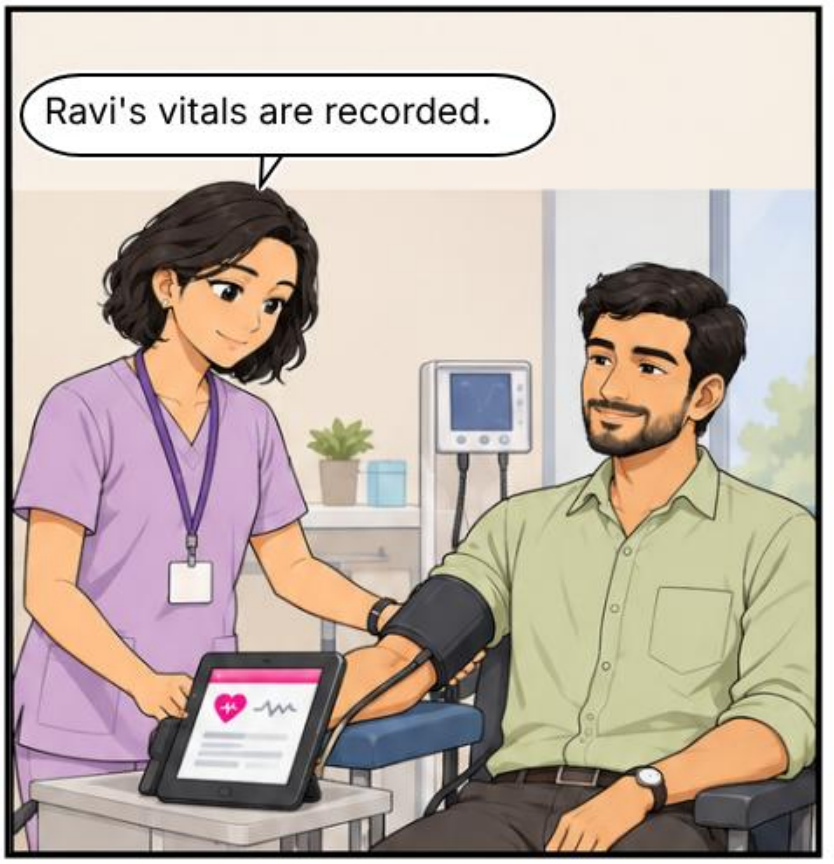

Registration and consent become part of a connected workflow.

I'm not very comfortable using my phone.

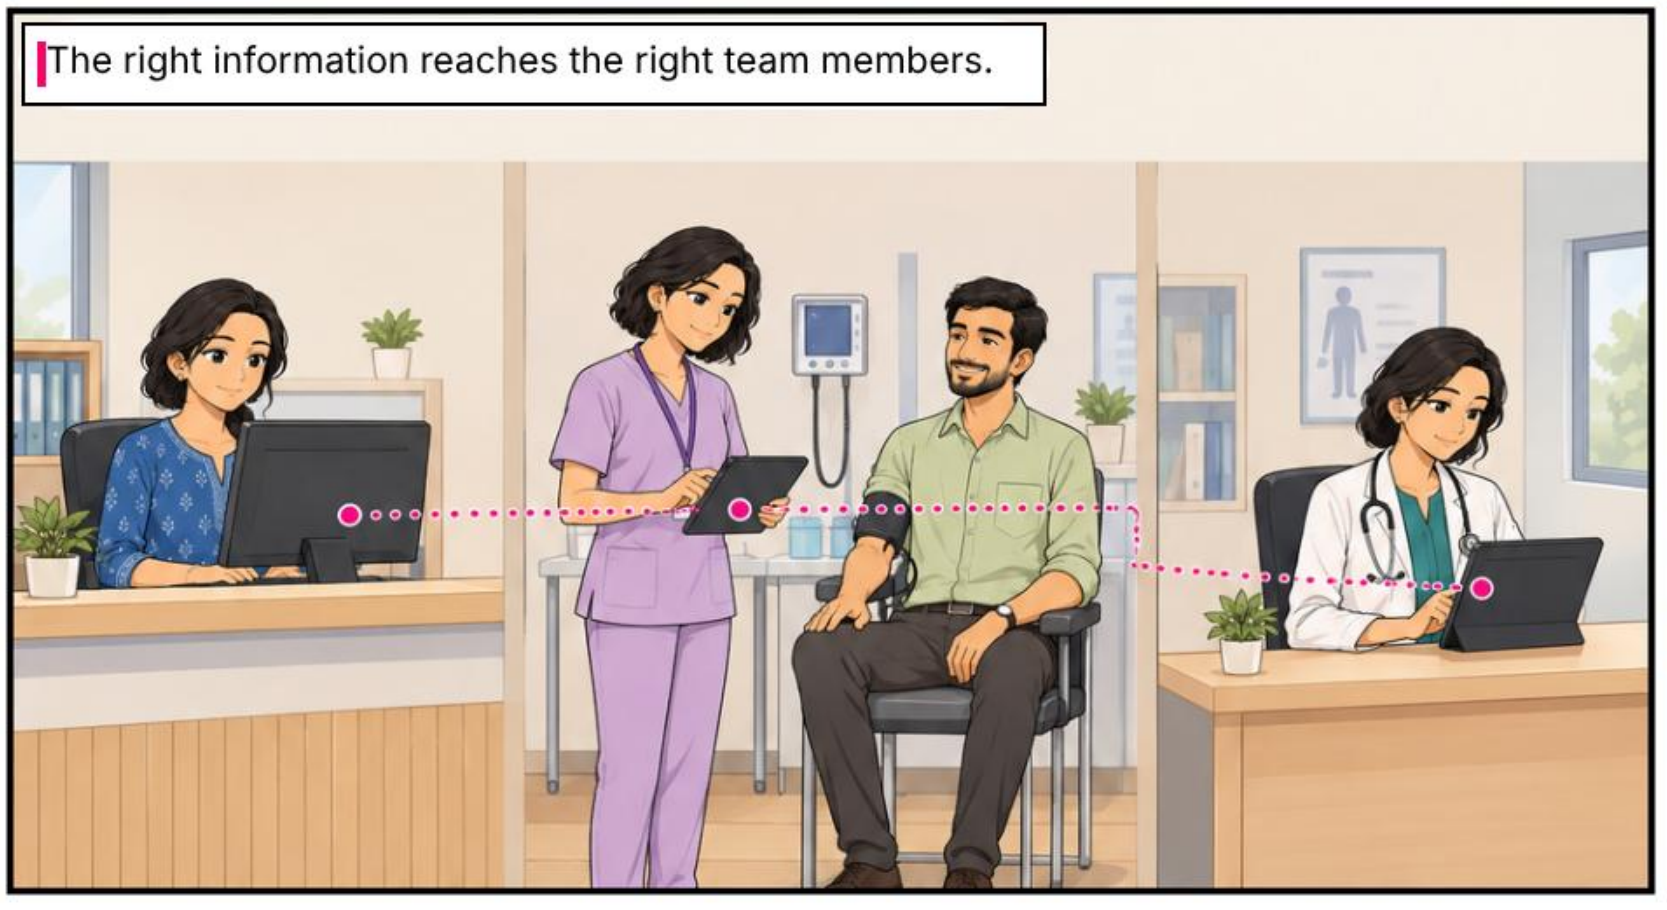

No problem, sir.
I'll help you register.

That was much easier than filling out forms!

The front desk can track who has arrived.

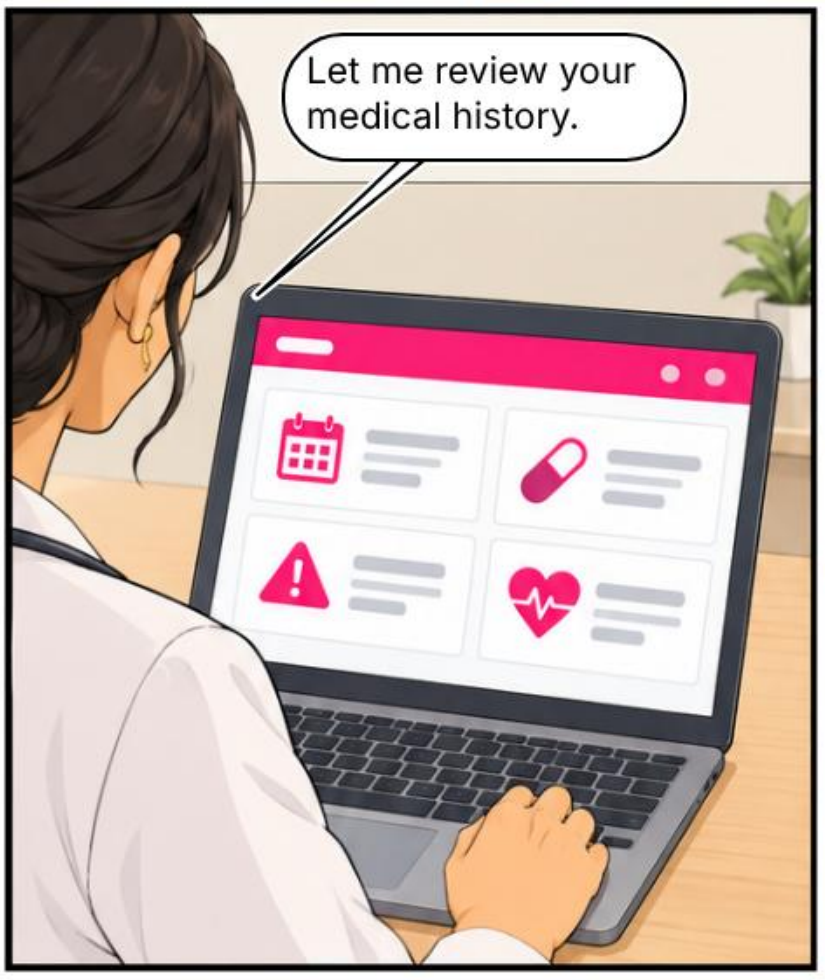

Ravi's vitals are recorded.

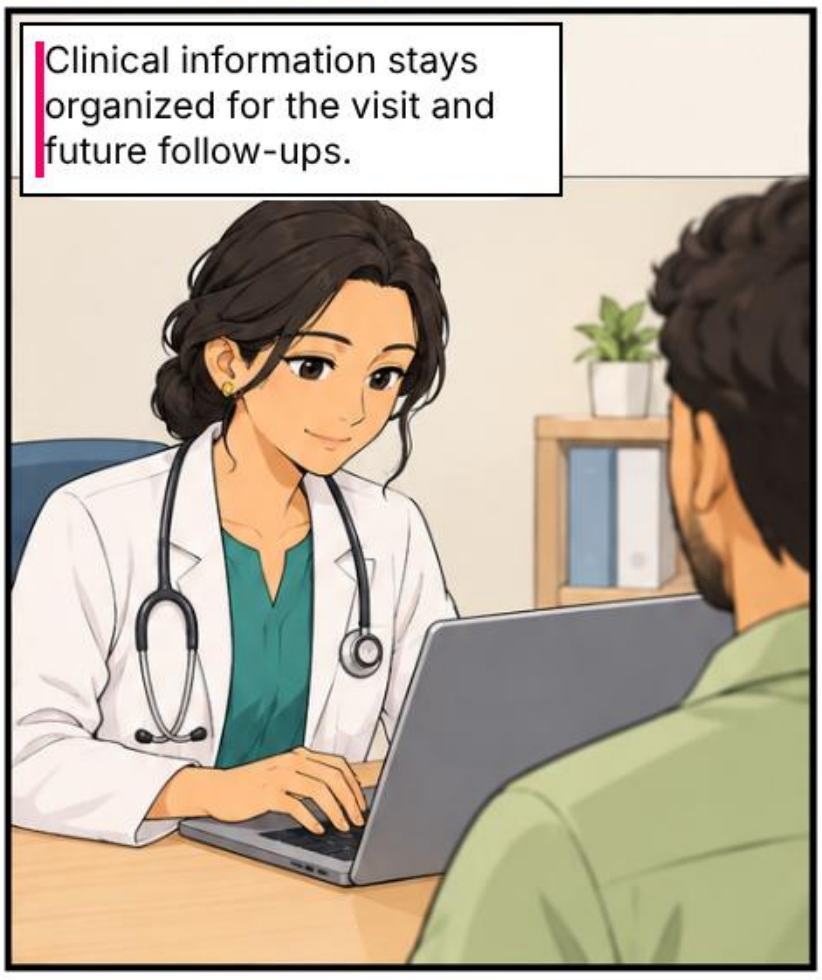

I can review his observations before the consultation.

The right information reaches the right team members.

Hello, Ravi. What brings you in?

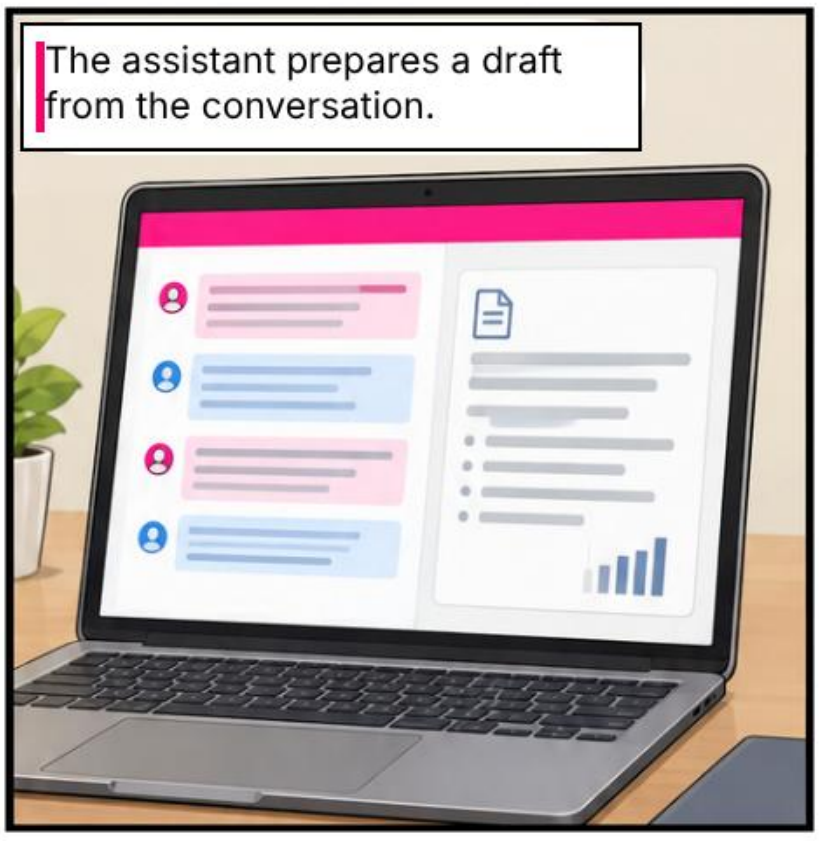

I've been feeling unusually tired lately.

Let me review your medical history.

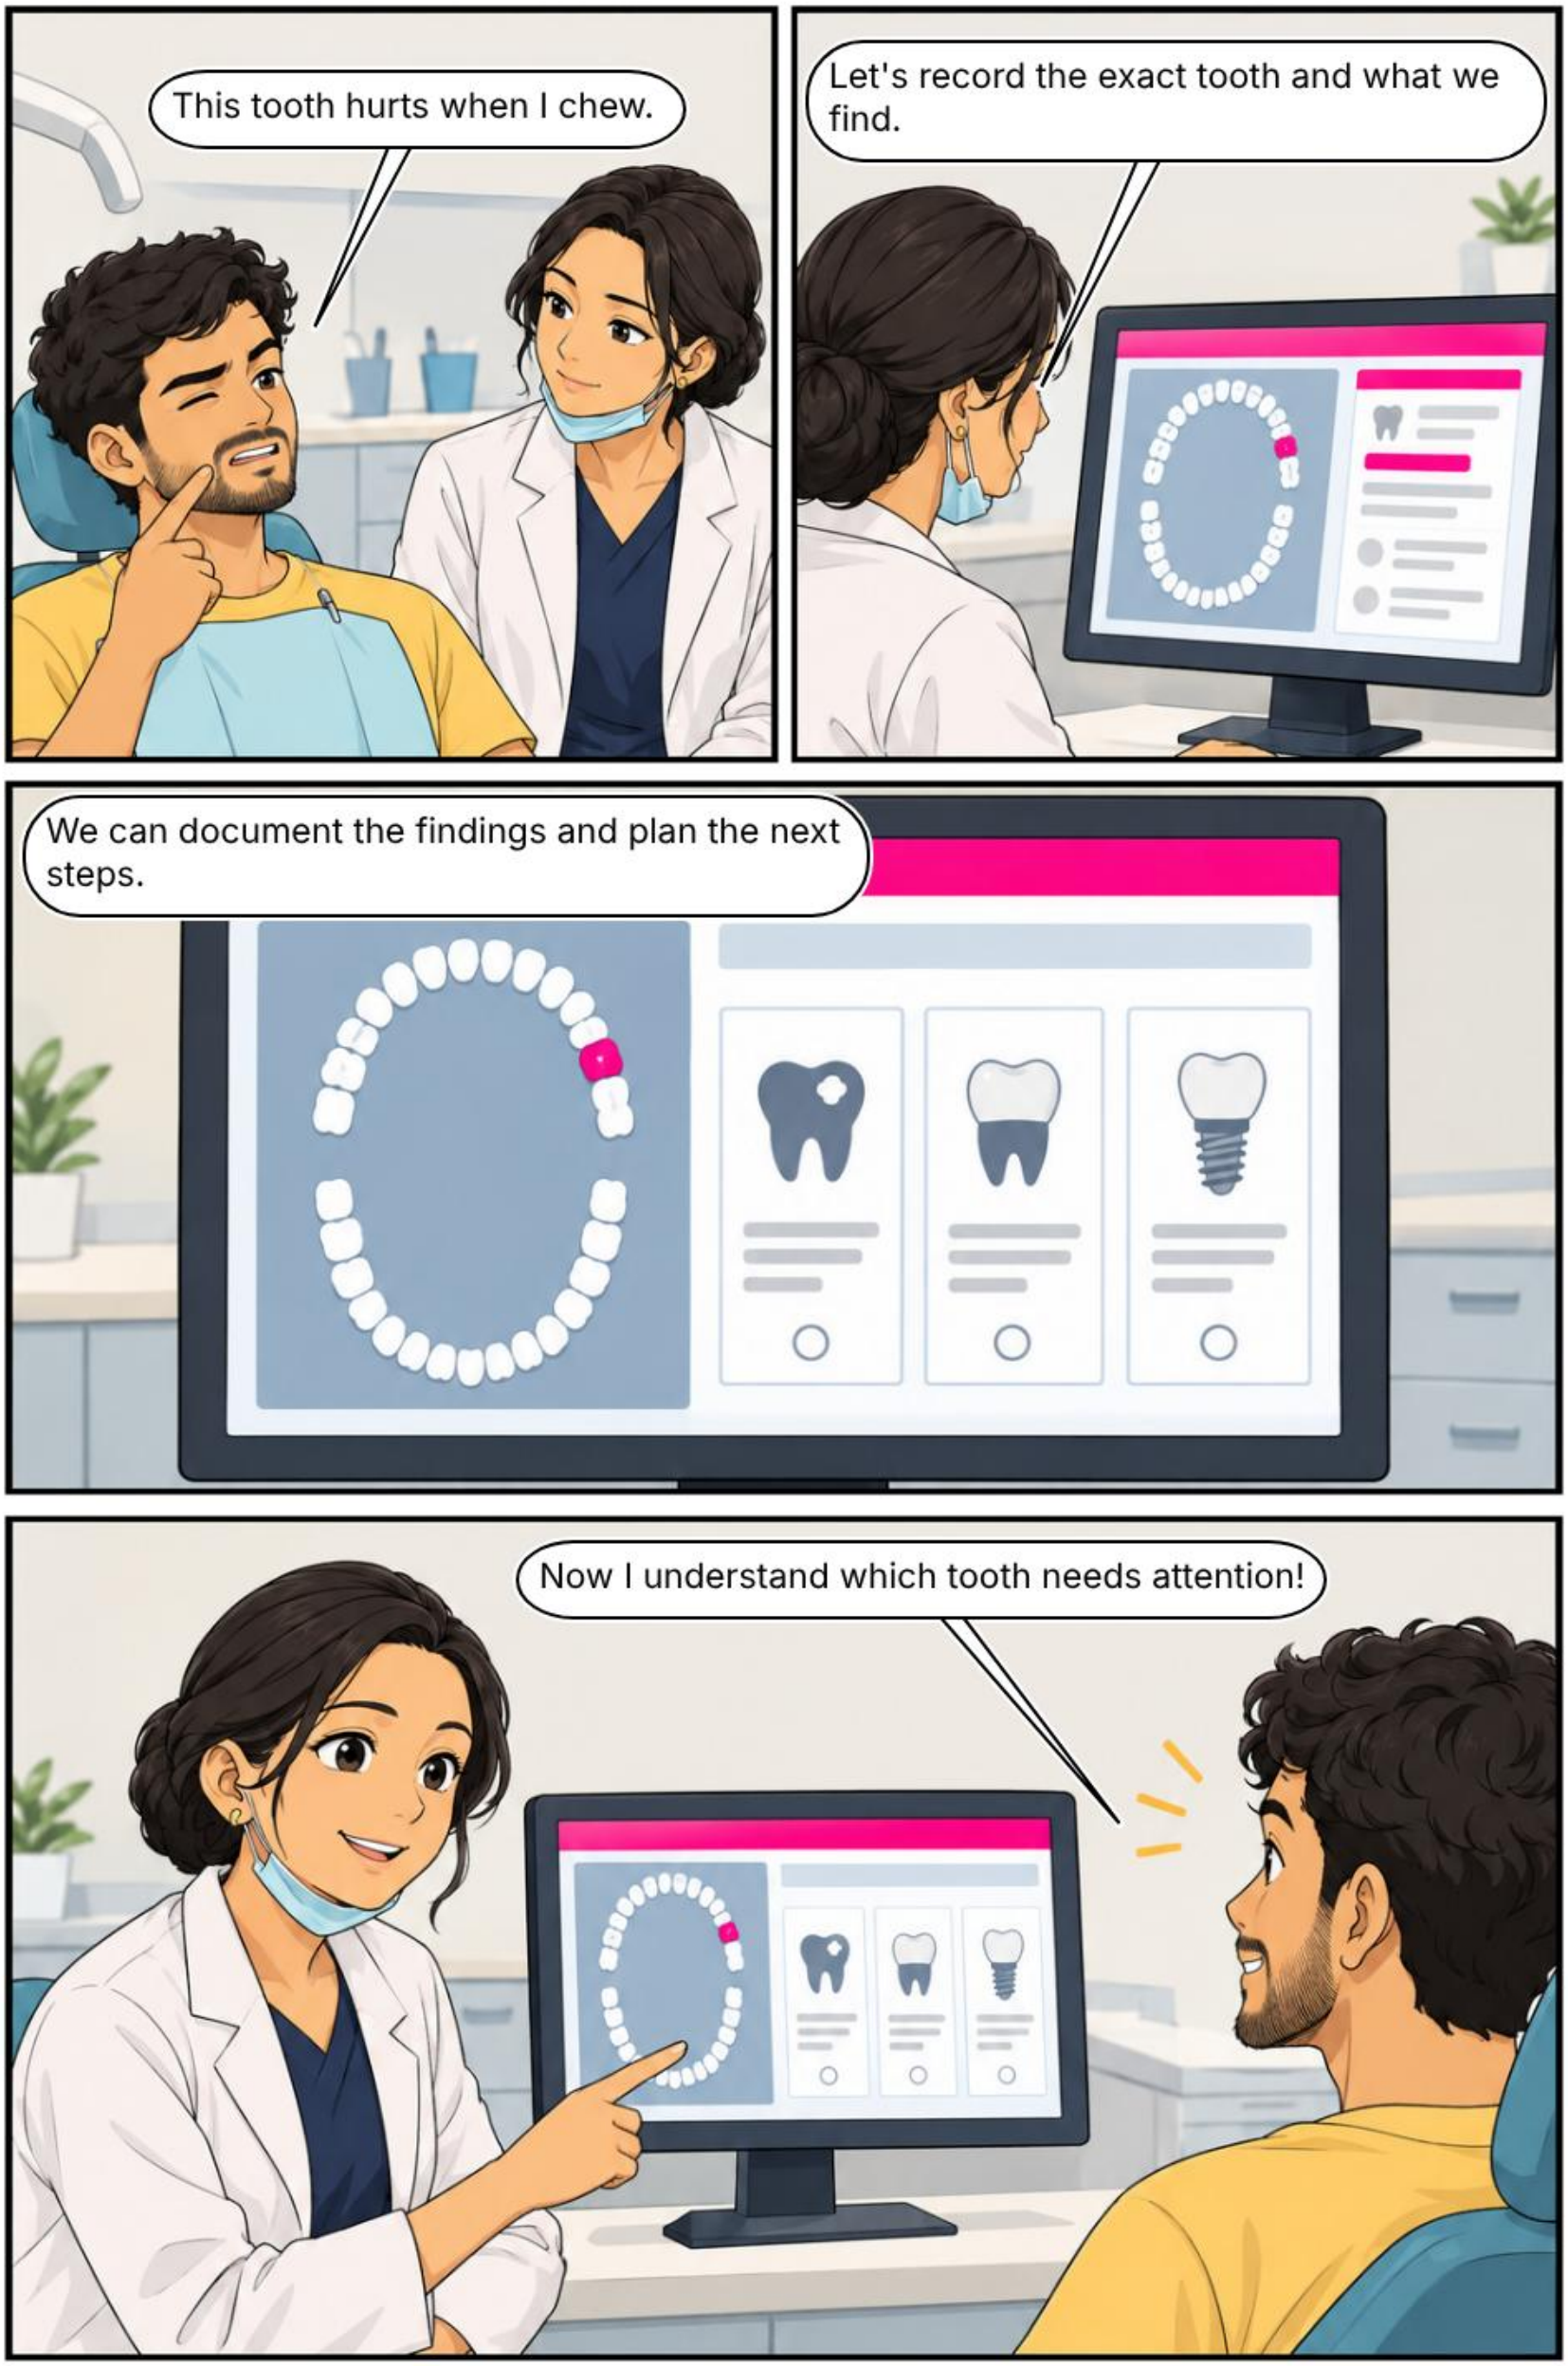

Clinical information stays organized for the visit and future follow-ups.

May I use a voice assistant to help draft my notes?
Yes, I consent.

SpeakADoc is designed to support clinical documentation.

The assistant prepares a draft from the conversation.

I'll review everything before completing the record.

This tooth hurts when I chew.
Let's record the exact tooth and what we find.
We can document the findings and plan the next steps.
Now I understand which tooth needs attention!

Distant objects have started looking blurry.

Let's check your vision carefully.

Specialized findings can be documented in the appropriate clinical format.

Thank you, Doctor. That makes sense.

This patch looks different from my last visit.

Let's record the exact location.

Images can help document the finding when clinically appropriate.

Now we can review how it has changed.

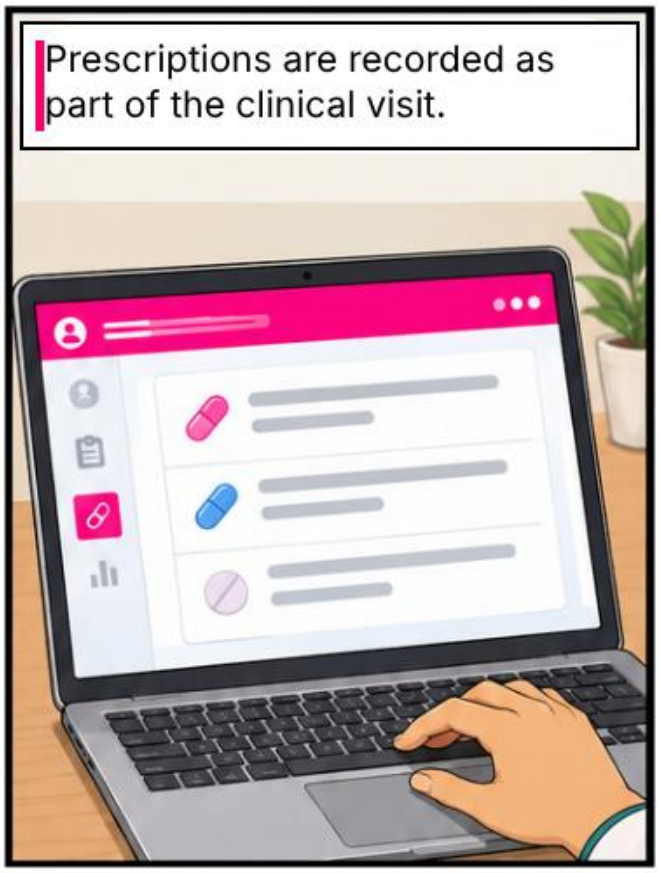

I'd like to check my child's growth.

Let's review the measurements.

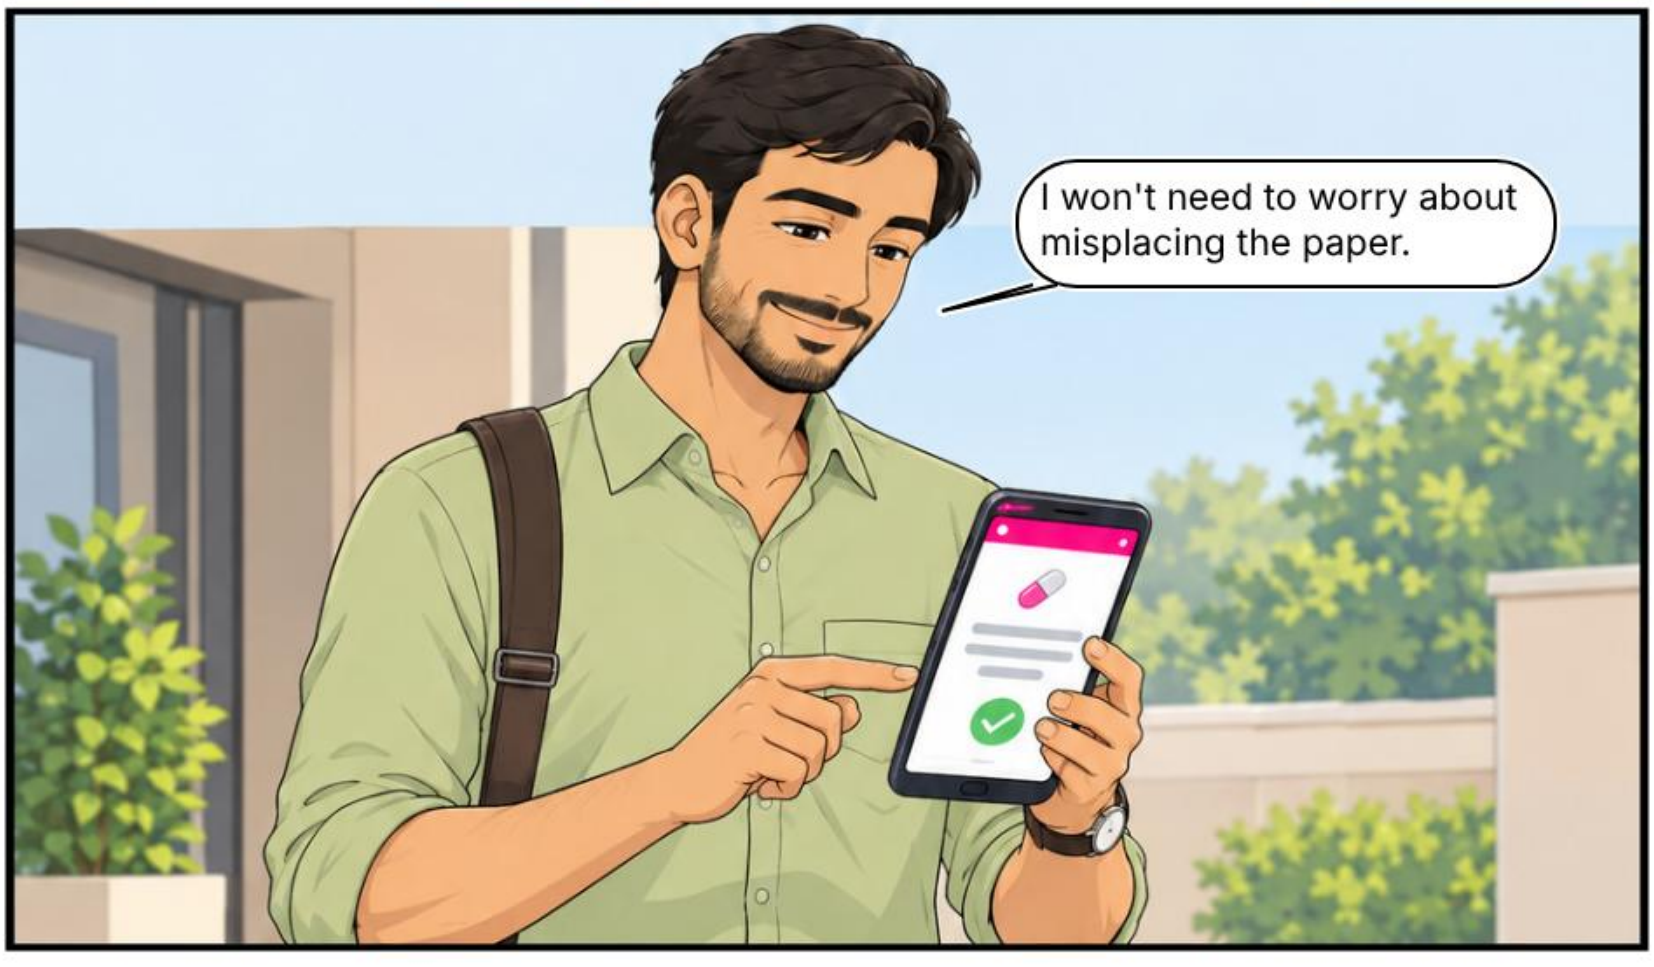

Welbuk supports structured children's health workflows.

It's helpful to see the information together.

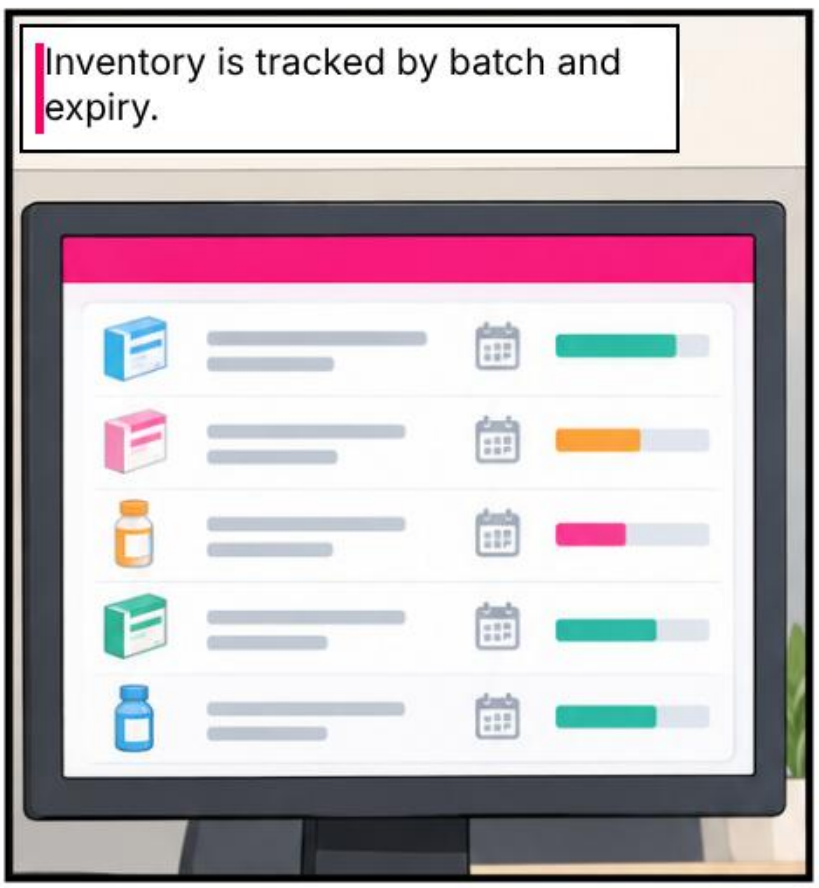

Let's go through the recommended next steps.

Prescriptions are recorded as part of the clinical visit.

I'll review the prescription before issuing it.

I won't need to worry about misplacing the paper.

Let's check the medicine stock.

Inventory is tracked by batch and expiry.

We'll dispense from the appropriate batch.

Dispensing and inventory remain connected.

I'd like you to complete these tests.

The test order is here.

Will the clinic receive the report?

The report will be updated through the workflow.

Orders and reports remain linked to the patient's care.

I'd like a specialist to review your case.

Welbuk supports structured referral workflows.

This helps us track the referral's progress.

The goal is better coordination between care providers.

Your consultation bill is ready.

Billing information is organized in one place.

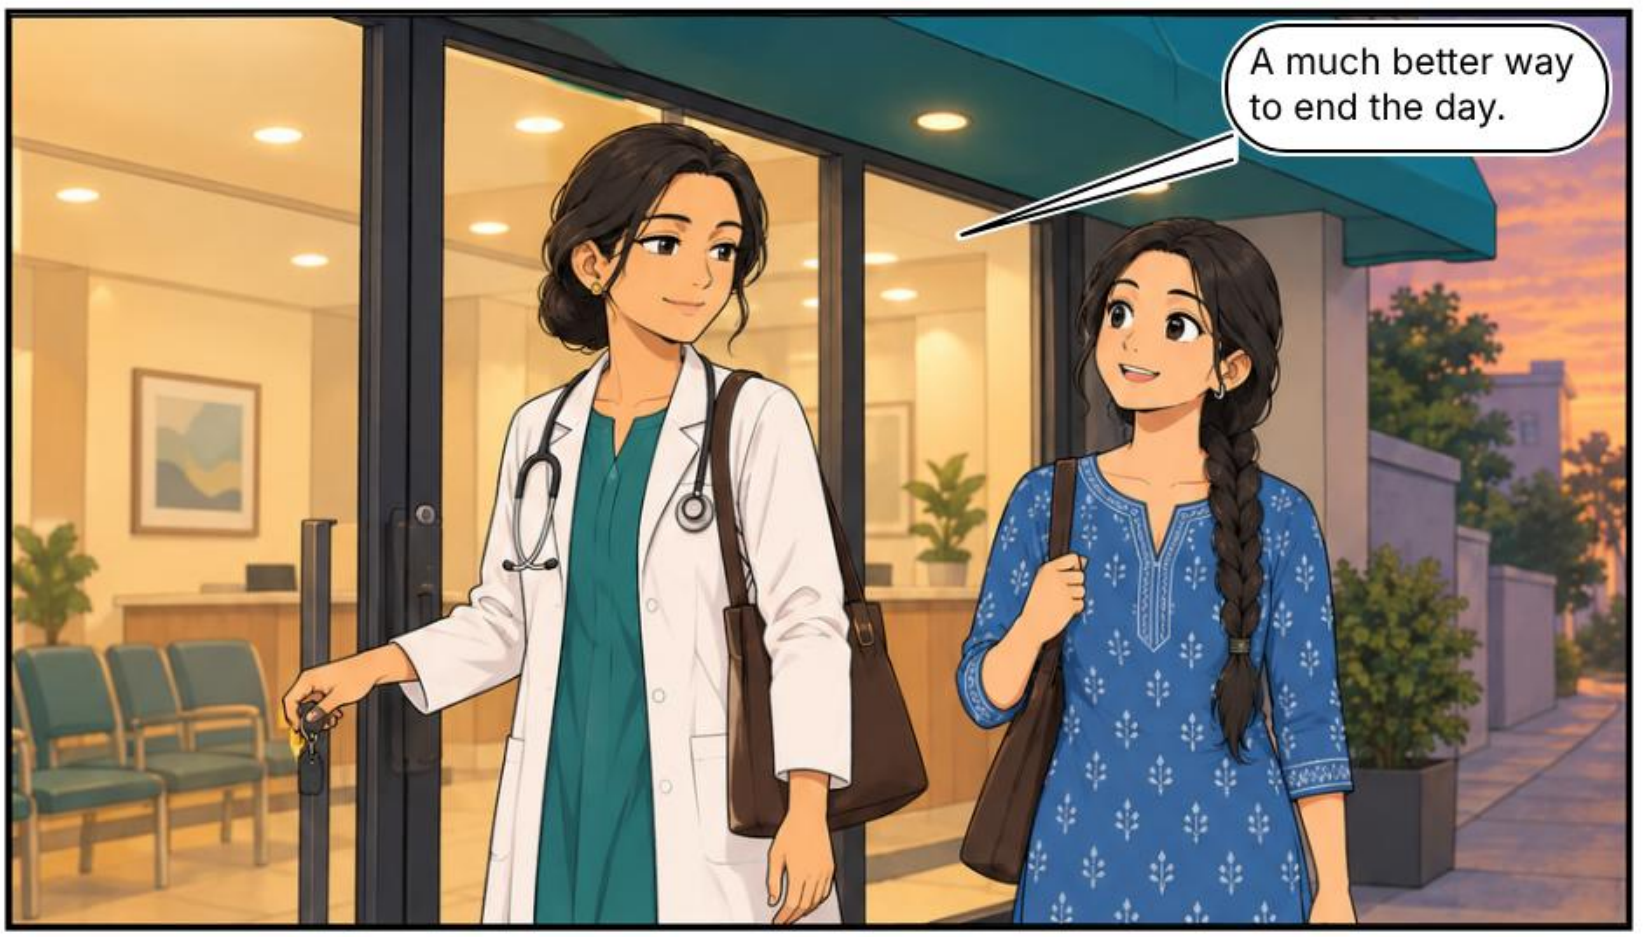

I'll pay by QR.

Payment received. Here's your receipt.

It's the end of another busy day.

Today's collections and balances are ready for review.

Clinic finances are easier to track and reconcile.

A much better way to end the day.

We're expanding. Can one platform support our locations?

CLOUD — AVAILABLE

Welbuk Cloud is available today.

What if a hospital needs a different deployment model?

Need on-premises or hybrid? Let's talk.

ON-PREMISES — LET'S TALK

HYBRID — LET'S TALK

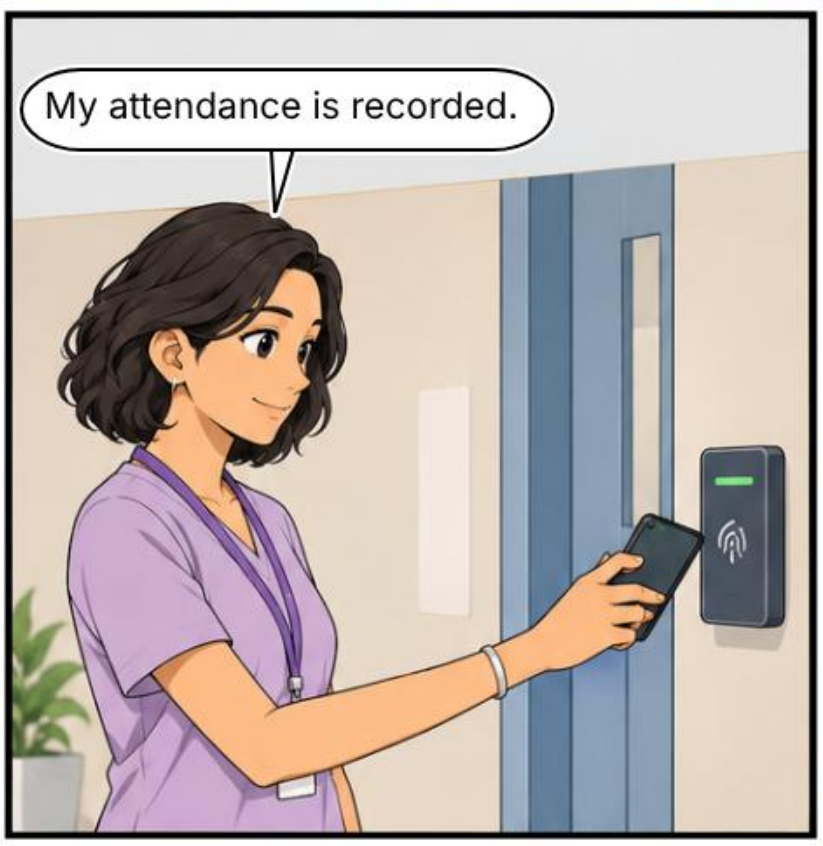

AIR-GAPPED AI — LET'S TALK

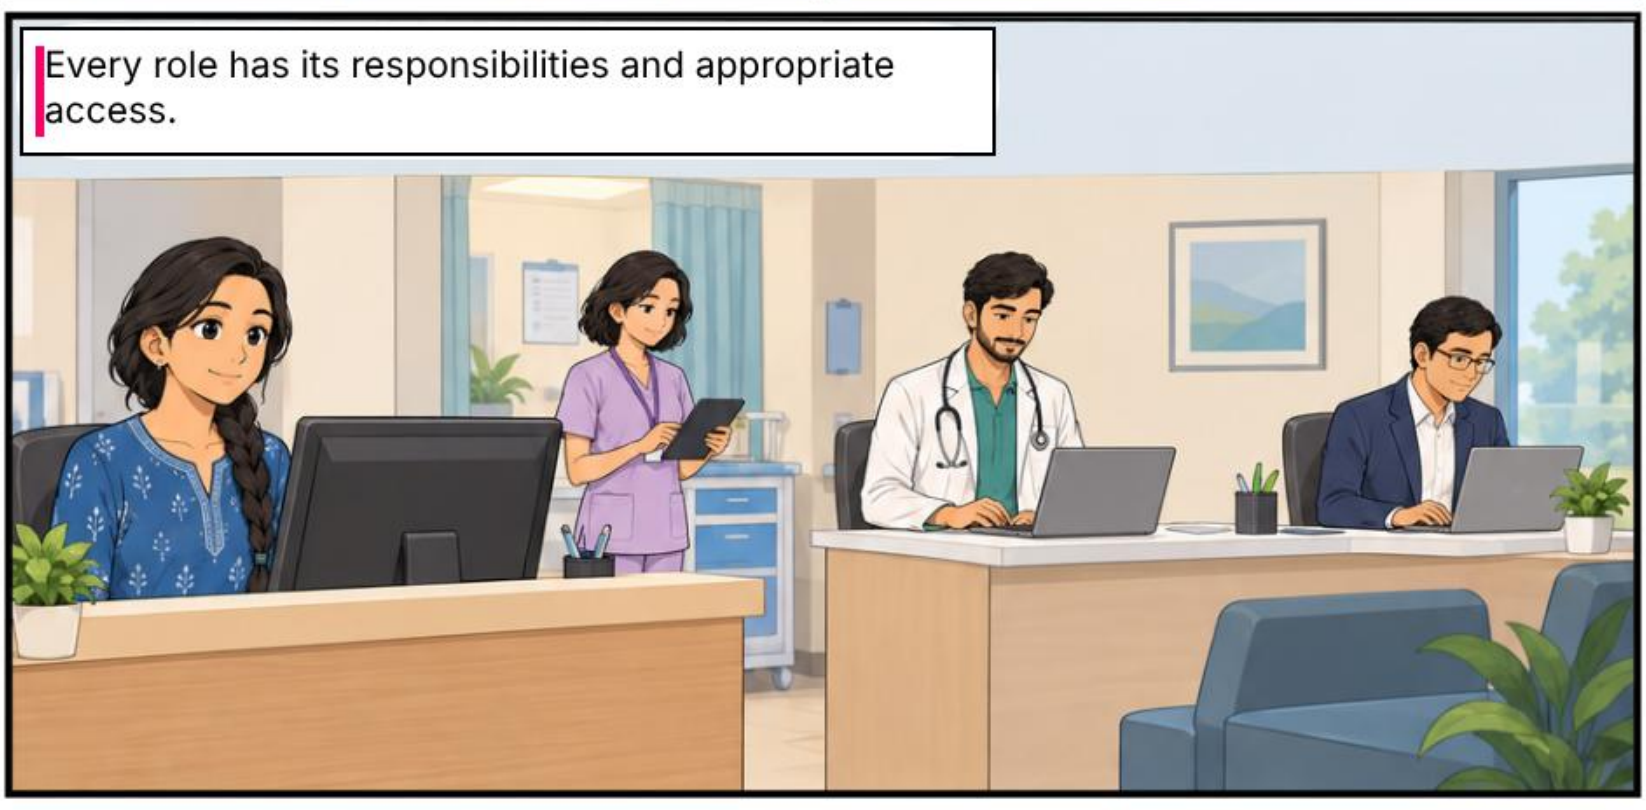

Need AI that stays inside your walls? Let's talk.

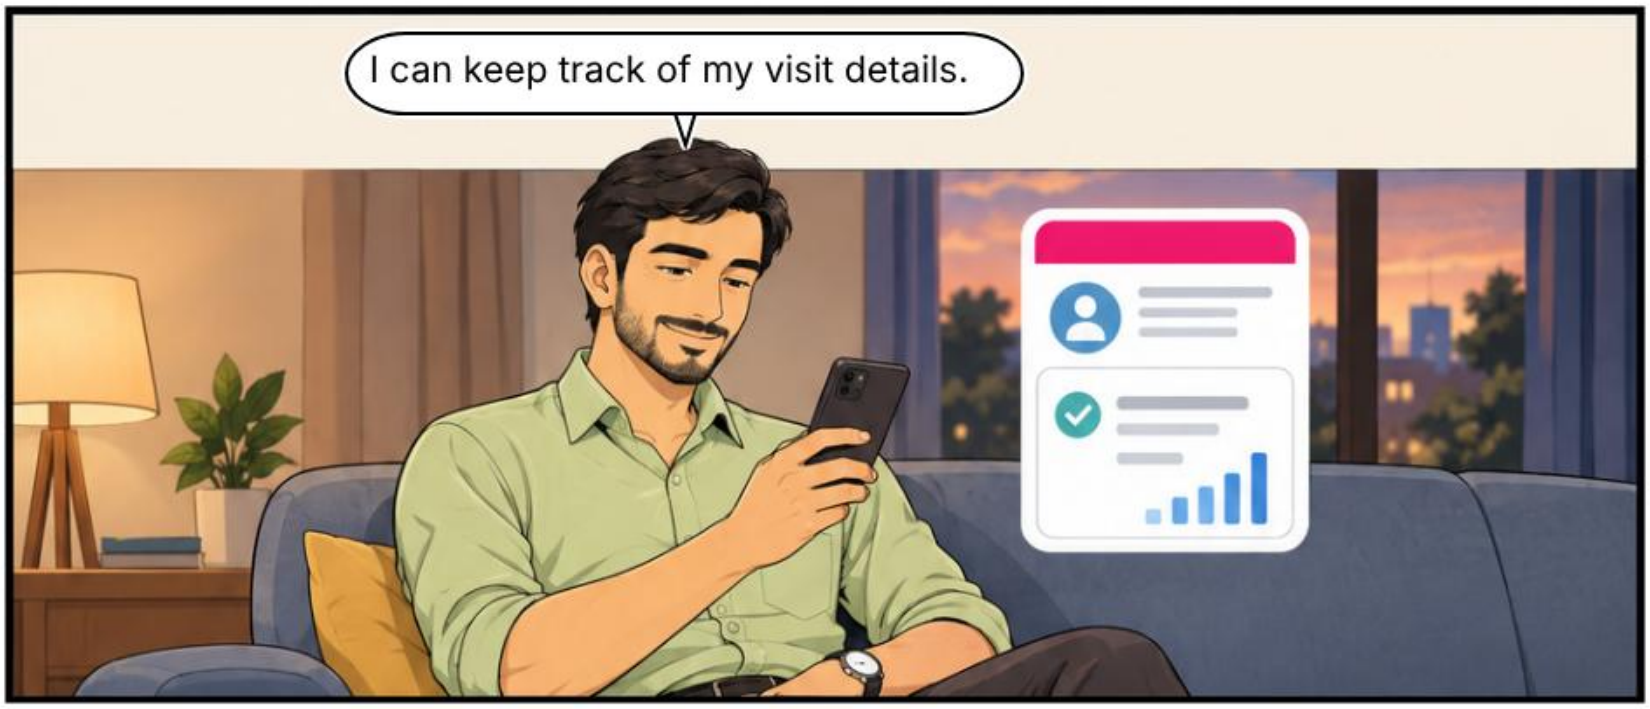

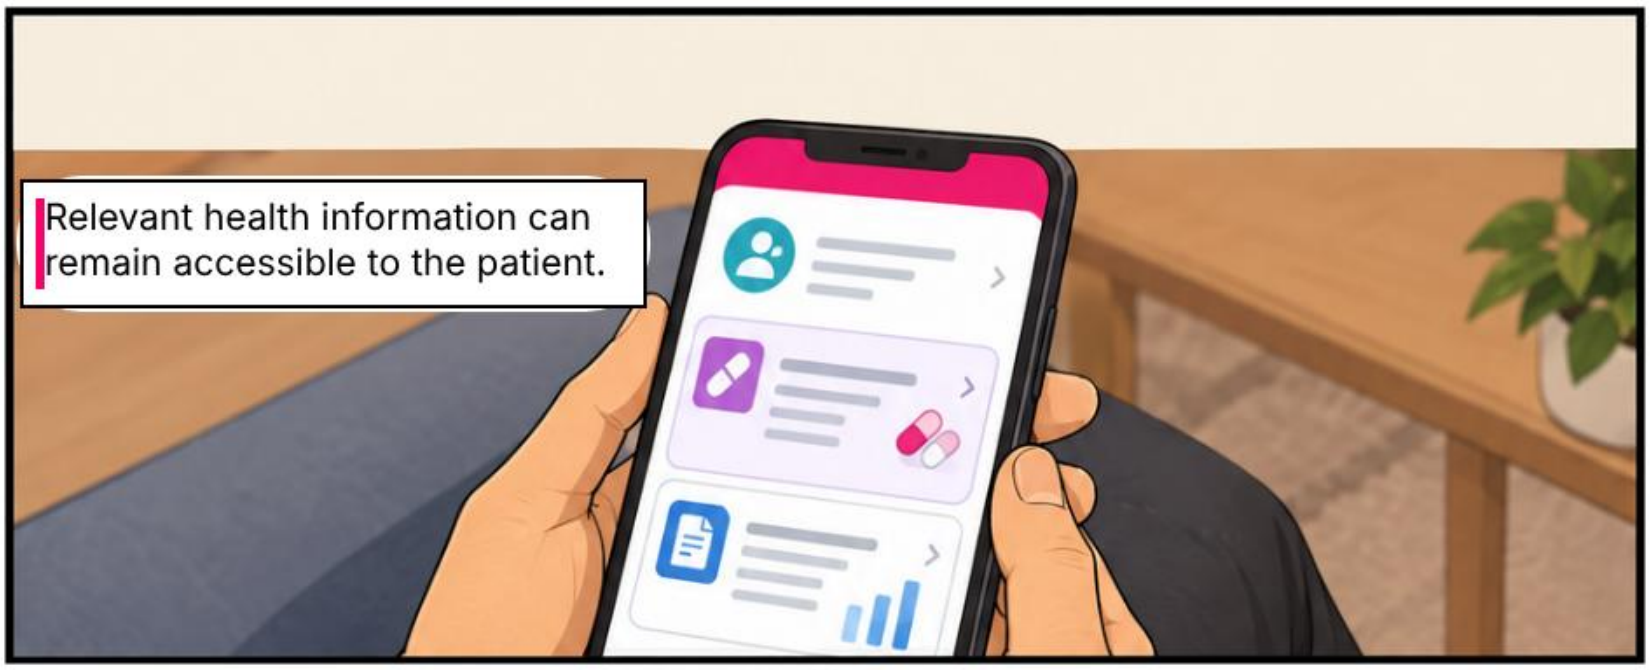

Good care depends on the people behind it.

My attendance is recorded.

I can review staff records and requests here.

Every role has its responsibilities and appropriate access.

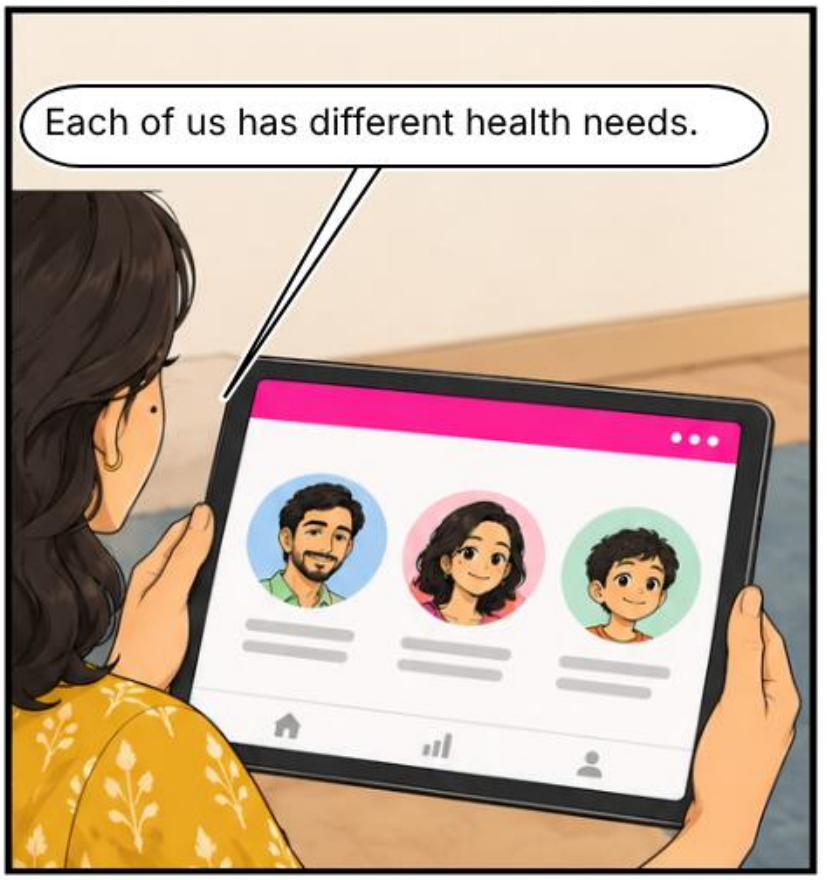

I can keep track of my visit details.

Relevant health information can remain accessible to the patient.

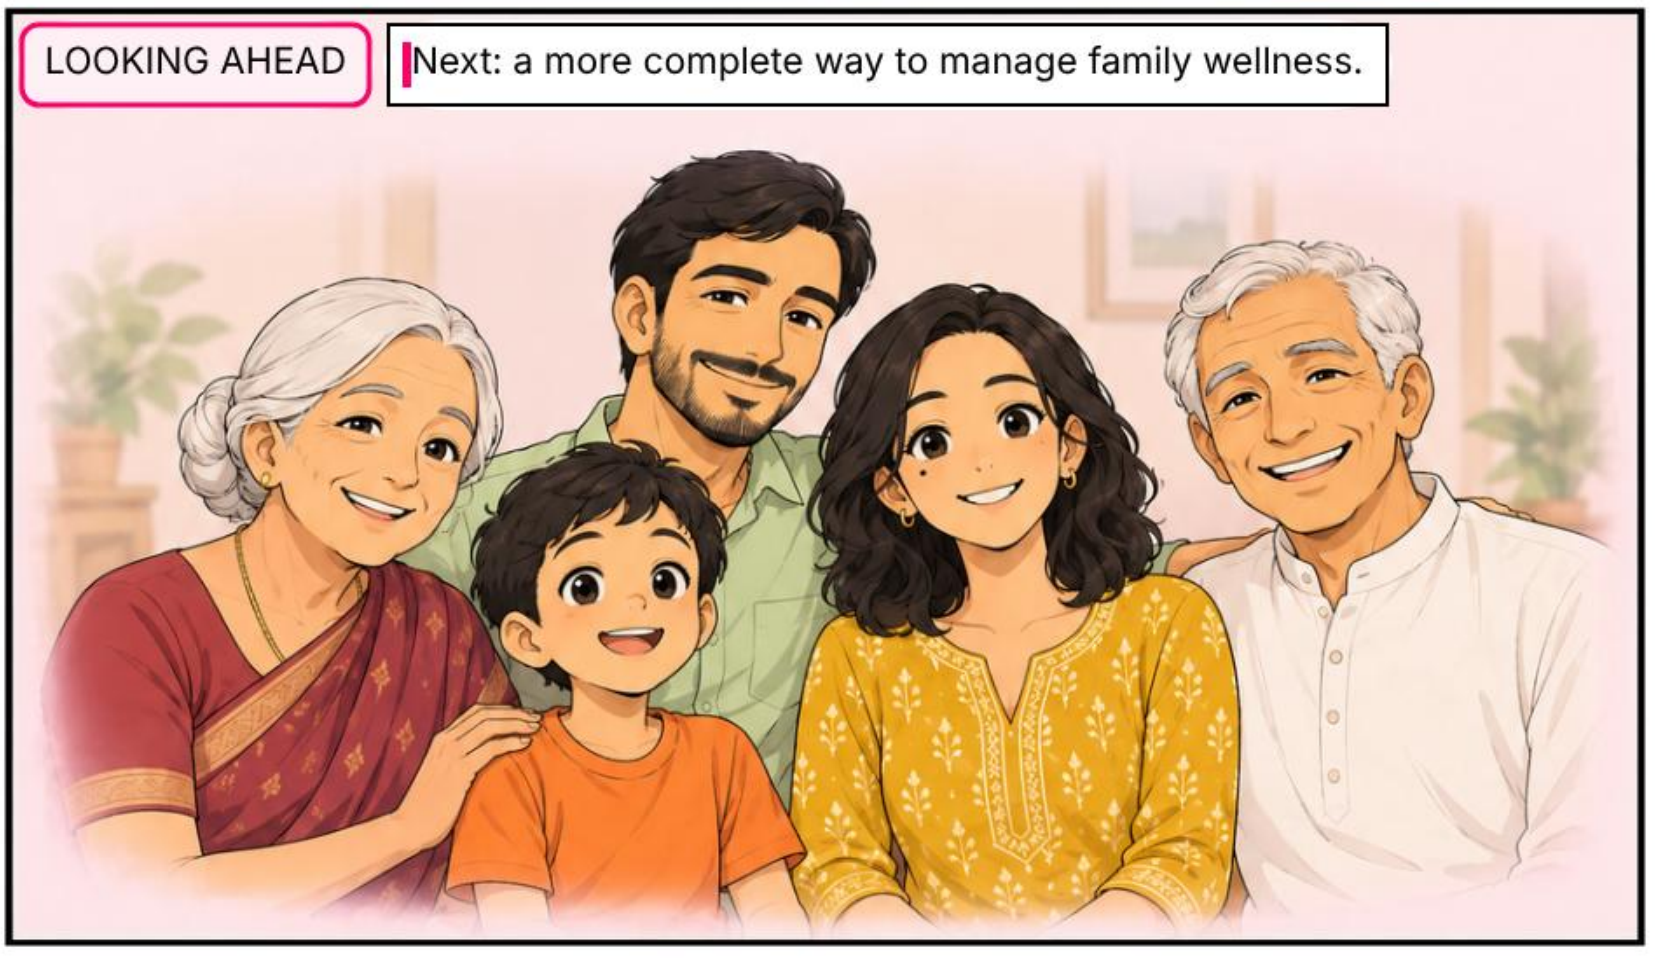

I almost forgot my follow-up!

Welcome back, Ravi. Let's review your progress.

Healthcare isn't just about my appointments.

Each of us has different health needs.

Family and children's wellness features are part of Welbuk Health.

LOOKING AHEAD
Next: a more complete way to manage family wellness.

LOOKING AHEAD

Life doesn't always happen in one city.

What if I could find trusted connected care here too?

The goal: appropriate record sharing with patient permission.

Let's continue your care with the information you've chosen to share.

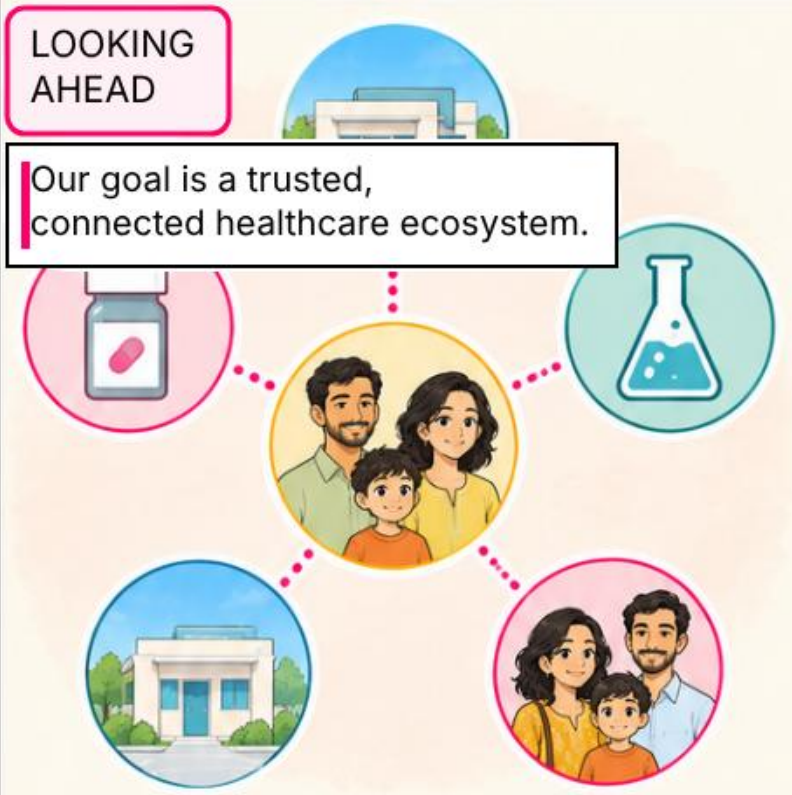

Welbuk Practice — Clinic and hospital operations.

Welbuk Care — Role-based tools for healthcare staff.

Welbuk Health — Connected patient and family care.

LOOKING AHEAD

Our goal is a trusted, connected healthcare ecosystem.

Everything Welbuk does

One connected platform for clinic operations, healthcare teams and patients.

Appointments & front desk

- Online booking with doctor schedules
- Slot allocation for booked visits and walk-ins
- Prior, Walk-in and Emergency queue priorities
- Live queue and token display
- QR check-in with digital consent
- Assisted registration at reception

Clinical care

- Electronic medical records: history, allergies, medications, vitals
- Vitals recording by nursing staff
- Doctor consultation queue
- SOAP-style clinical notes
- Digital prescriptions and prescription history
- Specialist referrals with status tracking

SpeakADoc voice documentation

- Patient consent before recording
- Voice transcription with speaker separation
- AI-drafted clinical summary
- Doctor review before the record is completed

Specialty workflows

- Dentistry: odontogram, findings, treatment planning
- Ophthalmology: visual acuity, refraction, eye charts
- Dermatology: body-site mapping, clinical photos, visit comparison
- Paediatrics: WHO growth charts, vaccinations, screening

Pharmacy & laboratory

- Batch-wise inventory with expiry tracking
- FEFO dispensing and live stock levels
- Lab orders linked to the patient
- Sample collection and result review

Billing & finance

- Invoicing with applicable GST
- QR and other payment methods, receipts
- Balance tracking and refunds
- Day-end reconciliation and financial reports

Staff & administration

- Role-based workflows and access control
- Staff records and attendance (HRMS)
- Leave and department management
- Notifications across the team
- Multi-facility operations

Patients & families: Welbuk Health

- Visit history, prescriptions and reports
- Follow-up reminders on consented channels
- Family profiles with guardian links
- Children's vaccination and growth records

Deployment

Welbuk Cloud	On-premises	Hybrid	Air-gapped AI
AVAILABLE	LET'S TALK	LET'S TALK	LET'S TALK

LOOKING AHEAD

- Welbuk as one trusted network connecting clinics, specialists, pharmacies and laboratories
- Cross-city care with consent-based record sharing

Doctors remain responsible for all clinical decisions. Screens in this comic are illustrative.
